Cloud Integration and Transformation

NTG will guide your agency/organization in unlocking the power of the latest cloud technologies to build a more scalable IT infrastructure. We offer full scope solutions, from consultation to design and development, cloud backup solutions, and ongoing support for installation and migration.

Cloud

The NTG Experience

NTG ensures you have the right infrastructure and cloud-based solutions in place, whether it's a public, private or hybrid model. Our 40+ years of experience, defining cloud technology solutions enable customers to achieve their goals faster and more efficiently. We work with all industries, from government agencies, start-ups, private corporations, to International organizations with locations worldwide.

We understand each customer's needs are unique and diverse. In some cases, you may need diversify cloud technologies, in tandem with solutions, in order to reduce time, cost and risk.

WHO WE **ARE**

NTG is a CVE certified Service-Disabled Veteran-Owned Small Business (SDVOSB), providing best-in-class IT Architecture design, and Integration solutions. We provide innovative, beneficial solutions and customize implementation and support per our customers' unique requirements.

WHAT WE **DO**

Whatever the challenge, NTG will optimize your company's network infrastructure using proven business strategies and industry standards.

Our project managers and network engineers are at the forefront of strategy and technology across government and commercial industries.

WORK WITH **US**

NTG is established on the core strength of integrity, transparency with clients, and consistent past performance. Dedication to excellence and commitment to customer satisfaction are top priority. NTG's values are apparent in everything we do. Our goal is to elevate your business to greater heights by providing a better customer experience.

Start with NTG

We can get you there – we provide flexible models to suit your budget requirements – thus, helping to make your digital strategy cost effective and executable.

Our approach results in cloud solutions that exceed business expectations and will reshape the way commercial and government agencies thrive.

Do you want to move your On-Premises Infrastructure to the cloud, but still retain management control? Are you ready to further reduce costs and manpower, by transferring daily operations and management to a third-party cloud services provider? Or, is your goal to design, build, and maintain a private cloud solution, unique and secured within your existing infrastructure?

NTG Will Help You Choose the Cloud Model that Fits Best

Public Cloud: With Public Cloud solutions, a third-party provider provides all resources, such as virtual machines, applications, and storage available over the Internet. This reduces the cost to implement or maintain physical appliances in-house, thus, saving cost on hardware, space, power, labor, management, and maintenance. Public Cloud uses a multi-tenant approach in a completely segregated environment. You only pay for what you need on a subscription basis and have the ability to scale up or down quickly to meet changing demands and workloads.

NTG utilizes leading Public Cloud providers, such as Microsoft Azure, Amazon Web Services (AWS), and Google (GCP), assisting with full implementation and migration of your services and infrastructure. We also have a 24/7/365 Service Desk that supports, monitors, and manages your Enterprise environment.

Private Cloud: The Private Cloud model is a custom, internal, cloud infrastructure, which gives you complete control of your environment. It is dedicated to your agency/ organization, and not shared. The Private Infrastructure is hosted on-site or in a third-party data center, allowing greater levels of control and security with computing, storage, and networking; all are fully customizable to your business needs.

NTG can design and build a dedicated, Private Cloud environment, using a combination of technologies that are right for your unique requirements. We manage the whole process from design to delivery, and provide continuous monitoring and management, as needed.

Hybrid Cloud: Hybrid Cloud solutions bring together a mixture of environments to suit your specific requirements. The Hybrid model uses a combination of Public and Private Cloud functionality, using Colocation, IaaS, and existing On-Premise hardware (since not all workloads are suitable for the cloud).

The Hybrid model is popular with various organizations because they can deploy the right workload into the right environment as their computing needs change. Also, Hybrid Cloud provides greater flexibility, increased cost savings, and more flexible options.

NTG can create a custom, Hybrid IT environment that meets your business specific needs, while providing an agile, flexible, and scalable solution that aligns with your aspirations and goals.
